Exclusive: She Got the COVID Shot So She Could See Her Grandchild. Now She's Plagued by Health Problems.

Terry Donohue Jenkins had a full and fulfilling life until, under pressure from her family, she got the Pfizer COVID-19 vaccine. Now, she can barely run her business.

By Michael Nevradakis, Ph.D.

Miss a day, miss a lot. *Subscribe to The Defender's Top News of the Day.* ***It's free.***

In 2021, Pickerington, Ohio, native Theresa "Terry" Donohue Jenkins had a fulfilling life, operating her pet-sitting and dog-walking business, spending time with her stepson and her 1-year-old grandchild and awaiting a new grandkid — her daughter's second child.

Jenkins also worked out regularly, a habit she began in 1997. She was in "tip-top shape" in 2021, she said.

That was before the then-54-year-old received her first — and only — dose of the Pfizer-BioNTech COVID-19 vaccine on July 22, 2021. Jenkins immediately experienced an adverse reaction to the shot, which in the coming days morphed into several severe adverse events, including a series of mini-strokes.

Jenkins, now 56, has since been diagnosed with Raynaud's disease, paresthesia (pinched nerve), bursitis, a microembolism, peripheral neuropathy, small fiber neuropathy and other conditions.

She can no longer exercise and now requires assistance to run her business.

Her father recently died, likely due to adverse reactions to the COVID-19 vaccines, and her brother also sustained adverse events following his vaccination.

Jenkins shared her story in an exclusive interview with The Defender. She provided extensive documentation to substantiate her story.

'If I wanted to see my new grandchild, I would have to get vaccinated'

Jenkins told The Defender she initially was reluctant to get the COVID-19 vaccine. "I was against the vaccine the whole time," she said. "I don't even take the flu shot. I think I've taken it twice in my life."

In April 2021, Jenkins was infected with COVID-19. At the time, President Biden and federal agencies such as the Centers for Disease Control and Prevention (CDC) were strongly encouraging vaccination, even for those who already had recovered from the virus.

According to Jenkins, this messaging influenced her daughter, who told Jenkins that if "I wanted to see my new grandchild, that I would have to get vaccinated."

Jenkins' daughter issued the ultimatum in April 2021, well in advance of a planned visit in August of that year.

Jenkins told The Defender:

> "I waited until the last minute, and I pleaded with her, trying to tell her 'I don't think this is a good idea, because they've not done studies on people who've had the infection and then gotten the shot. They literally have never tested it.'
>
> "I had heard somewhere about 90 days of suggested wait time [following a COVID-19 infection]. So, I waited 90 days, and I kept procrastinating, but I knew I was getting close."

Finally, Jenkins went to a local grocery store and decided to get vaccinated while she was there. However, even the pharmacist on site appeared reluctant to vaccinate her. As Jenkins recounted:

> "I explained my situation [to the pharmacist] and I was crying, because I didn't want to get it.
>
> "She asked, 'Why are you getting this shot?'
>
> "I explained to her why. I asked if I could get the [single dose] Johnson & Johnson vaccine.
>
> "She said, 'I don't recommend that because of your age, and you're a woman, and there's the chance of blood clots.'
>
> "I asked, 'What do you have?'
>
> "And she goes, 'Well, we have Pfizer.'
>
> "And I said, 'Well, I guess I'll take that.'
>
> "She goes, 'You know, there's risk to everything.'"

Jenkins said she had searched online and on social media to find information about getting vaccinated after a COVID-19 infection, but at the time, she couldn't find much.

"I was busy running my business," she said. "So, I looked where I could, I looked on social media. I didn't see anyone having a bad reaction."

She added:

> "My brother got the shot and he had COVID before, and he said he was really sick for a couple days. And my sister had gotten a shot and she didn't feel well for a day or so. So, I expected that."

But Jenkins experienced a near-immediate reaction, she said.

"As I got the shot, I tasted metal immediately," Jenkins said. "I waited 15 minutes and my throat was kind of tight, but I really thought it was just because I was crying."

After the 15-minute waiting period, Jenkins left the supermarket.

"After a couple of hours, I started feeling tired," she said. "And then probably about four or five hours later, I started feeling tingling. I started getting these weird tingling sensations in my extremities. I'm like, 'Whoa, this is weird.' And I thought, 'Well, this is probably normal.'"

Those symptoms were followed by more fatigue, shortness of breath and later that night, pain in her calf.

Jenkins tried to convince herself that her imagination was playing tricks on her. Nevertheless, she said she began writing a text message to her husband, informing him about how she was feeling and about her whereabouts, as she was spending the overnight hours dog-sitting for a client.

"I literally thought to myself I could die in my sleep," Jenkins said, "but I just let it go," thinking she was just being over dramatic.

Still, Jenkins took notes about her symptoms. She said when she woke up the following morning feeling "really sick," with a racing heart, a cough and fever, shortness of breath, headache, blurred vision, light sensitivity and diarrhea, she thought, "This is worse than COVID." "I was miserable," she added.

On the evening of the second night after she got the shot, Jenkins said her hands felt really strange. "My feet felt weird, too. I looked down at my hands and on both of my hands from the second knuckle up, all of my fingers turned completely white, numb and cold."

That's when she decided she wasn't imagining things.

Jenkins went to see her doctor, who told her, "I don't think you should get the second shot. I think you had an anaphylactic reaction," basing this diagnosis on the tightness Jenkins felt in her throat.

"I also noticed that when I was there, my blood pressure was 20 points higher than what it usually is," Jenkins recollected. She told a nurse who said it was probably just "stress" or "anxiety."

However, her doctor told her that the tingling sensations and other pains she had experienced in the preceding days, which had subsided, were "not side effects of the shot."

Jenkins requested a letter from her doctor documenting her opinion that she should not receive the second dose — which the doctor provided.

"Because I knew my daughter wouldn't believe me," she said.

The next day, Jenkins experienced a series of ministrokes. She said:

> "The first one I had, I remember I was walking away from my refrigerator and as I was walking forward, I fell backwards. And then everything got blurry and I felt like I was dreaming. Everything was really surreal.
>
> "I had the TV on, and I could hear what they were saying, but I couldn't understand the words. So, I hit the information button to try to read it and everything was blurry. I couldn't read anything, and I couldn't even read when I got close enough. I couldn't even understand what the words said.
>
> "And I just thought, 'This is weird, why is this happening?' But then it would go away after like 10 or 15 minutes."

However, convinced by her doctor and nurse that she was just experiencing stress and anxiety, Jenkins did not go to the hospital. "The doctor said I was fine, that I'm okay, so this must just be my imagination," Jenkins said.

Jenkins said she experienced constant brain fog after this series of mini-strokes, describing it as "walking around with my head in the clouds for weeks, probably for months."

During this period, the tingling, numbness and cold sensation in her extremities also returned. She also has since heard "ringing in my ears all the time" and experienced blood pressure spikes.

Ultimately, doctors diagnosed Jenkins with paresthesia, peripheral neuropathy, small fiber neuropathy and Raynaud's disease — as well as microembolism, which was diagnosed by a neurologist a few days after her series of mini-strokes.

"My neurologist told me, 'You had microemboli that caused you to have these mini-strokes,' Jenkins said. "She goes, 'I've been seeing this in my patients. I've been seeing an overwhelming number of people coming in here after getting the shot that have the same symptoms as you.' She knew what it was."

Her neurologist added a note to Jenkins' file stating that she should not get any more vaccines of any kind, due to her reaction to the Pfizer-BioNTech shot. According to Jenkins, her neurologist said, "You have no history to explain any of the things that you have right now."

"I still have episodes of blurred vision," Jenkins said. "And something else I also have is vertigo, which has come and gone. But I've been going through time periods of a week at a time where I have this vertigo. Every time I lie down or stand up, I just get dizzy."

She also goes through periods where she loses hearing in her right ear, she said. "It would be probably 50% of my hearing. Everything is muffled. I cannot make out what anyone is saying and then it just goes away … I've also developed problems with bursitis suddenly, in my knee and my hip."

'I just felt like doctors don't really care'

Despite the willingness of two of her doctors to connect her symptoms to the Pfizer-BioNTech COVID-19 vaccine and to write notes advising her not to get any more vaccines, Jenkins said that after some other negative experiences, she stopped visiting conventional doctors.

"I just felt like they don't really care," she said. "In the beginning, I did try different medications," recounting one visit with a doctor where she was prescribed heart medication to treat the symptoms of Raynaud's disease.

"The more I learned about the pharmaceutical complex, the more I decided that I'm not giving them any more of my money," she said.

Jenkins told The Defender she started pursuing a "naturalistic path" and has worked with a functional medicine practitioner, who put her on a gluten-free, dairy-free diet devoid of processed foods and sugars.

"It's helped a little bit," she said. "It's helped take the pain level down, probably from a 'six' to a 'four,' but there's always pain."

In May 2022, Jenkins started seeing a doctor from the Front Line COVID-19 Critical Care Alliance, who prescribed her hydroxychloroquine and ivermectin, which she said, "helped me a lot … [they] cleared up so much of my brain fog, got rid of my light sensitivity, got rid of my headaches, got rid of my blood pressure spikes."

Jenkins reported her condition to the Vaccine Adverse Event Reporting System (VAERS), but never heard back from anyone there. Historically, VAERS has been shown to report only 1% of actual vaccine adverse events.

'They have brainwashed people'

The vaccine injuries have severely affected her day-to-day life, Jenkins told The Defender.

"I've had to actually hire somebody to help me run my business because I can't be outside," she said. "I'm exhausted, I am so tired and I have brain fog and I'm fatigued. My memory is awful. So, it's really affected my whole life."

A lot of her days consist of trying different healing methods, like red light therapy and sauna. "I use frequency wand, it's supposed to help," she said. "I do meditation. But I don't do a whole lot anymore."

The vaccine injuries took a toll on her relationships with family and friends, too, Jenkins told The Defender. "It's affected my relationship with everyone. I've lost so many friends, my family … my sister."

Referring to her daughter, who gave her the ultimatum to get vaccinated, Jenkins said:

> "She never apologized to me for putting me in this situation. She told me it was my choice and that I could have waited until the pandemic was over. I told her at the time, 'Do you not understand that they have no plans on ending this any time soon?' And I was right. It was almost two years later that they finally decided to end it.
>
> "No sympathy whatsoever. Probably a year later, she goes, 'I guess some people had a hard time with the vaccine … I'm sorry, your body didn't accept the vaccine.' That's what she told me."

Jenkins is now worried that her daughter will get her grandchildren vaccinated. "I'm so worried about them because there's a genetic component to this, and I'm desperate for her to listen to me."

She said her daughter has had three COVID-19 shots since Jenkins was injured. "Trying to make sense of that has been very difficult for me," she said, "because it's made me look at our relationship a whole other way."

She added:

> "How could you not believe your own mother and still get these shots? Then I have to remember, they have brainwashed people. There's no other explanation. How can you possibly think it's rare when it happened to your own mother? So, it's really strange."

Jenkins also lost a couple of friends, including one who told her she "didn't think I should be sharing my story because it was making people not want to take the shot." Yet, Jenkins said that "a few months later, she shared with me that her fingers were tingling."

Someone who has been supportive of Jenkins is her husband. Jenkins told The Defender:

> "My husband is very supportive, but I feel really awful for him because I'm not the same person that he married. I'm not the same person I was two years ago. But he's there for me and he's very caring.
>
> "If it wasn't for him, I don't know what I'd do, because I've had some pretty dark days."

'They've destroyed us'

Jenkins told The Defender that her 59-year-old brother, who was also in exemplary shape for his age, appears also to have experienced adverse effects following his COVID-19 vaccinations.

She said:

> "My brother actually had chest pain after his booster. In the year since he got that shot, he's developed high blood pressure. He now has numbness in his toes, and he just had a detached retina.
>
> "He even said to me, 'This may or may not be vaccine-related … I've never in the last 10 years had any health problems other than ITP [immune thrombocytopenia].' His blood doesn't clot, so I think it saved him."

This is "the eternal struggle that I go through all the time," Jenkins said, "trying to mentally cope with all three different facets of my family that are in denial."

Jenkins has found a modicum of support from Catherine "Cat" Parker's COVID-19 Vaccine Adverse Reactions Support Group on Facebook but says the constant stories shared by vaccine-injured individuals have become depressing for her. She said:

> "To be honest, in the beginning they were helpful because I saw I wasn't alone. I tried a lot of what everybody else is doing and nothing was really working. And then, it's gotten to the point where it's just depressing, and I don't look at it anymore. I don't like looking because every time I look, I see people having new problems and are getting worse and it makes me even more depressed … But I know it's helpful to a lot of people.
>
> "I hate to say that, but I literally have given up on ever getting better. I don't think we're going to get better. I don't think we're going to heal. I think they've destroyed us."

Jenkins advises anyone injured by the vaccines, and anyone reading her story, to "never trust your government."

She added:

> "I never believed that my government would allow me to be hurt, even though I didn't trust the shot because it was new. I never thought they would do this, knowing it was hurting people. So, people need to really reevaluate who they listen to."

I know if sounds cold to some but If my daughter had told me that I could not see my grandchildren unless is subjected myself to an injection of an unknown substance I would have simply resolved myself to no longer seeing my grandchildren because my daughter is basically telling me that she does not care about my life. I cannot see allowing myself to be an emotional hostage.

I agree..this whole thing has brought the worst OR best out in people all over the world. Unseen heroes and visible zeros. Blinded and brainwashed many that we thought were intelligent and strong. Woke up many that were previously asleep. A major shift, a separating, a dividing.. I never dreamed my own parents, brother, aunts & uncles, & some cousins would put complete and total faith in an experimental pharmaceutical gene therapy or believe the lies our government and media are telling... No amount of reasoning or info changes their minds. Their minds are blinded. They refuse to even look at anything but mainstream news. At least my 2 children are awake..

Jordan Peterson has an interesting interview with Naomi Wolf discussing the concept of 'disgust' to get people to do bad things. Fear will make you recoil but disgust will make you act to get rid of the 'disgusting thing.' Taking a play from Hitler (based on his influence from the US Eugenics movement) our government used concepts denoting contamination, disgust, and dirtiness so others felt entitled to erase us.

My brother gave the same ultimatum to my mother. I had told her all the reasons not to trust the vaccine and she was adamant she would never get it. Then because of the ultimatum she did get it. It broke my heart. She didn't want it. She almost immediately developed shingles. Mostly she is OK but I wouldn't blame her if she kept any side effects from me. I am soooooo angry at my brother over this.

My parents pressured my sister and her kids into getting it and told my extended family I'm a mentally ill conspiracy theorist because I tried to share information re. the jabs not found on MSM so they could make an informed choice. I haven't spoken to them since. They've shown their true colors.

I am so sorry about this! Our government has divided our families, friends, parents, children so much that we are at each other's throats, do not believe each other and find ourselves on the other side of the fence. Just know some people were in this fear they could not get over, some were coerced, some did not know. We have to find a way to come back together bc it is none of our faults how this happened, but we need to heal now.

It is not everyone in Government who is to blame. It is a few strategically-placed individuals who managed to bring everyone down. People are busy living their lives. If they had few reasons and few suspicions before, they were caught off-guard. It was planned and quite unbelievable sometimes.

Wow! How refreshing to know that I am not alone.
My brother took it because his son and daughter in law told him that he could no longer see their 2 year old child unless he took the shot - and he did. It totally astonished me because I am an MD and for my entire life my brother has ALWAYS asked for my opinion about medical decisions - ALWAYS!

When this thing started I told him that it was not a vaccine and that even though I did not know what harms ir could bring I knew enough Immunology to know that it had the potential to increase cancer growth or start new cancers and the potential to triger autoimmune diseases which could affect ANY body system. But he did it anyway because he said that he would rather be dead than not see his grandson. WHAT??? His son and wife were telling him that they did not care if he died! I told him that I would have left it up to his son and daughter in law to tell his grandson that THEY were preventing interaction.

I value my own life and my quality of life and cannot see myself making a decision that could deprive me of either for the "privilege" of seeing another person, even if it is my grandchild. I would simply say Goodbye.

I agree! Some would see a child telling their parent to get an untested, gene therapy, or not see the grand-kids as cold! They obviously aren't concerned about the health of the parent, but then, that's what the propaganda was about.
They pushed it as a way to protect others, which was a total lie. All it did was cause this kind of issue.
I can see soomeone saying, if your're ill, please don't visit so you don't spread what you have, but telling healthy people to stay away or get an experimental drug, is beyone reprehensible.

10 days ago
Totally agree with you. So many of us have been cut off from family as a result of positions we took during the pandemic and post pandemic. I, too, have been cut off from grandchildren (then 9 mos and 3 years old - now 3 years old and 6 years old) not because I would not take the jabs but because I saw alcohol dependency and witnessed and reported child abuse as a result of the excessive alcohol. I felt my duty as a grandparent was to protect my grandchildren whatever the cost, and now I have been cut off from any contact with them. My daughter in law totally supports those jabs as does her entire family and I am scared for both my grandchildren that they will be subjected to them. I have resolved myself to no longer seeing them and pray that when they are older and grown, they will reach out. My heart aches for Terry Jenkins. The cold heartedness of her daughter's reaction to her mother's injuries as a result of the shot is simply evil.

People who do not do their own research are totally brainwashed by the media, CDC etc. They are apparently unaware of the depopulation plans of Bill Gates and the rest of the globalists by using vaccines and planned pandemics. This leaves them open to manipulation by the government and media shills.

I just wonder how her family feels now? Oh wait! Please don't tell me they're the kind who refuse to believe that the jab is not safe and effective and cannot hurt people. I would never see my grandchildren, because there's no way I'm taking that jab.

Eventually the truth will come out. I do not know if it would make me feel better if people felt guilty about what they did and how they reacted with me & with the idea of vaccination. In most cases, it may not have really been completely their fault and they are the ones who were vaccinated. I am more concerned about the people who got vaccinated for certain health issues than I am about myself. I only have to deal with shedding from vaccinated people and maybe I might have had Covid-19 or a cold and maybe I have gotten some slight, almost inperceptible side effects from those things. Also, all the mask wearing, restrictions on social interactions, economic turmoil with unusual losses and gains for different groups of people in the economy, increases in cost of living, etc. It is better to try to find some positive outcomes - this is like a Golden

Opportunity to help end the reign of Big Pharma as it is and to get the most positive outcomes possible for everyone. I feel lucky to have been able to be more aware. "But by the grace of God I am what I am...."

Well said. Instead of being bitter and angry, best to broadcast love to all who were misled.

I remember well how fearful my mother was of us getting polio before the Salk vaccine was introduced and how literally the entire country lined up eagerly to get the shots. We thought we were witnessing a miracle and the epidemic was over.

After reading Turtles all the Way Down, I understand more about the situation.

One reason I like homeopathy so much is the idea of healing with what is essentially energy resonance with the symptoms our bodies are displaying. Just makes sense that the body produces symptoms to heal itself, and if we help the body do that, it works so much better! And herbs and diet and exercise and a well mind including lots of gratitude and forgiveness, all contribute to overall health.

I'm updating my own comment as I heard on Mary and Polly on Monday that her family is oblivious to the truth and that the daughter has received several boosters since this, and that another person in the family was hurt by the jab. Talk about being stuck on stupid!!!!!

I understand where you are coming from, however I really wanted to be involved in my grandbabies lives since mine weren't involved in mine. My heart overtook my brain and its the biggest regret of my life. If I could go back in time I would choose differently. As far as my daughter not caring about my life she was pregnant and in mama bear mode and honestly believed all of the lies being told so its not like she had heard anything dangerous about them that would put me at risk. We have talked since this interview and she actually apologized to me. I believe she has opened her eyes finally.

CG, obviously none of the likely outcomes of it are good- chances are all parties will be negatively affected from the jabs, kids, mother and grandmother. A triple tragedy. Only the grandmother realizes so far and to me that is extra horrid, having to wait for the rest of them to realize it too.

I suspect they will never "realize" it because to do so they would have to face the fact that they were instrumental in harming someone and most of these vax advocates don't want to admit that to themselves. The parents of many children who have died from this are still insisting that it was not the vax - because to do so would be to implicate themselves.

I wonder how she feels now? Disgraceful.

7 0 Reply • Share ›

CreoleGumbo → Deborah M. Damascus
9 days ago

I suspect that she feels just fine because most people who are in love with the vax and who believe the crap spewed out about safe and effective have a need to continue to believe it. So they convince themselves that whatever happened is just one of those things.

Excellent points made. I know someone who was a real holistic health advocate who got the jab from pressure from her son and daughter-in-law in order to see her 1st grandchild ... she has not had any negative health affects as far as I know; but who knows down the road ....

This poor woman. Imagine hearing that from your own flesh and blood, your own child. Yes, it's easy to say she should have resisted, but she obviously cared for her daughter, despite these differences, and wanted to see and cherish her grandchild. This is unfortunately emotional blackmail at its worst.

You may have been better informed about vaccines than this lady was at the time she had the vaccine. It would have been better if she made up an excuse that she had an emergency, was busy with her business and unable to visit. Then wait until there was more information available. She would have been able to see her grandchild in a few years. I had friends who could have avoided being vaccinated and I tried to explain why I thought it was a bad idea. It seemed they understood. Then a Doctor or someone else told them to get vaccinated and they did. So now I avoid saying negative things about vaccines to them. I even had one friend who disagreed with me and was enthusiastic about getting vaccinated, who now says he was coerced by his family into getting vaccinated. I just try to tell people they probably have already have had enough shots, since it was experimental there were many placebo shots with maybe just water, there were some batches of vaccines which created the most side effects and if they feel good, then chances are they will remain healthy. If someone is afraid and worried, they have a larger chances of having a bad reaction. This woman was crying, so it just added to the possibility of having more serious side effects. It is sometimes almost a waste of effort and some people want to avoid hearing anything negative about vaccines. Now, it seems people are becoming more receptive and somehow more people are less surprised to hear and be receptive to any opinions about the vaccines which claim they were quite useless.

I am an MD with training in Immunology so they could not have had a better informed person to advise them - and advise them I did - NOT to take this shot. I tried desperately to inform them that no one knew what the long term effects would be but that I knew enough to be AFRAID - VERY afraid of the shot NOT Covid, which is nothing more than the Common Cold. But my whole family, who always came to me for advice chose to listen to CNN and MSNBC over me. A year later one daughter developed hand, foot and mouth disease and the other cannot get pregnant.

I had a very bad feeling about the shot right from the beginning. I learned long ago that when I have a bad feeling about something (or someone), I know the right thing to do is avoid that thing or person. Then I started researching and hearing about all the negatives associated with the shot. I know that I dodged a bullet.

This woman should have just lied and said that she got it, but I'm sure her daughter would want to see her "vax" card. Children are not dying from C19 so why these parents insisted the grandparents to get this jab is beyond me.

We all make decisions based on life experience and emotions. We dont know where people are in that party of life so we can't say to them what they should have done.

Please don't misunderstand me.
I did not say what anyone SHOULD have done nor did I mean to imply as much.
I simply said that I would not allow anyone to shame ME into putting an untested substance into MY body because I value my life and if keeping my life and my health means that I cannot see my grandchild because his or her mother or father does not value my life then so be it. And this is particularly true because I am not ill! I am not a threat to my grandchild's life. I am not prepared to risk my life and health because someone with no knowledge THINKS that I am a threat to them.

Let me elaborate on that.... why people whom took the shots came from many different reasons, fear, coercion, lack of knowledge, force, etc. People come to different conclusions in life at various times bc we are all not on the same playing field all at once. The constant bombardment of "propaganda" by the CDC, FDA, WHO, whitehouse, medical community, etc. where the information we received was fraud made it hard for anyone without pure informed consent to make the right choice. At that time, many thought they were.

Telling people what they should have done, makes no difference now. I know what I should have received, which was informed consent. Plain and simple. And because of that, I am now vaccine injured and fighting to save the world and the people in it.

We have to learn to give ourselves grave and forgiveness and let that go. We also need to be kind to others and stop telling them I told you so. The division has to end as it was never about health protection but genocide, control and money. Let us turn that anger toward the guilty and hold them responsible!

The truth will out, eventually. I actually did consider getting a Covid shot when they first came out, but years of reading NVIC and Dr. Robert Mendelsohn's books and newsletters led to deciding not to go for it after all. I was lucky.

To repeat: I only commented on what I would and would not do - not on what any other person SHOULD do.

Same here. I never told anyone what they should do, only what I was doing. What I did do was suggest they do their research before deciding and not just blindly accept what we were told.

That is exactly what I told my husband. I love my kids and grandkids... but there is nothing that was or is going to make me get a jab to be able to be in their lives. I know several grandparents who did get the jab and now they have so many illnesses. Thankfully our kids had their heads on straight.

I am so sorry. This breaks my heart. I pray she will come to know the truth soon.

I don't know how many times I have heard or read of pressure being put upon people from their family, friends and social circle to be injected. We must all stand straight and not be swayed by stupid people who have no critical thinking skills, these people are walking towards a cliff and want to take you over the cliff with them. In the past three years I have learned to say no and not to comply. I hope this woman is able to achieve some sort of recovery and quality of life.

Why would you ever trust a pharmacist or doctor ever again? None of these people took any responsibility for giving mRNA injections and had no business injecting people with any experimental drugs. I would bet that these instances now number in the millions and if it wasn't murder, it's at least attempted murder. You have to draw a line somewhere even if it means not seeing your family.

We have some wonderful health professionals in our support group that we do trust because they are the ones that have been out here fighting for us and losing everything while fighting. You still have to trust some people because if you don't trust anyone at all how are you going to be able to get through anything ever? We need to have faith in humanity in order to get through this.
